

EMERGENCY GLAZING FILM

Emergency glazing film is a heavy-duty temporary film that is applied to a window once the glass has been broken. It is used to keep the glass safe and prevent the glass from cracking further when it is being removed from the frame.

The Emergency Glazing Films are a short term, cost effective solution while you wait for the glass to be removed. It is a clear film which means it doesn't hinder the vision through or prevent light into the room but is also more visually appealing than a boarded up window.

We stock the 175-micron film which comes on a paper liner which means you are able to cut the film to the correct size before installing it to the glass to create a neater appearance.

It is excellent to use in public places such as schools, hospitals, offices and shops. It is a very strong, durable film which is designed to keep your staff and customers around the glass safe from any further splintering of glass and breakage until the window is replaced. Also it provides a certain amount of waterproofing while waiting for the replacement to be fitted.

Accurate selection of window films requires specialist knowledge, and it is recommended that specifiers contact the company at the specification stage +44 (0)845 026 1125 or email solutions@opaluxwindowfilms.com
